The workspace of the application is divided into multiple windows that you can rearrange according to your needs or to improve your workflow. The tools that are used the most are grouped into three pallets: Tools, 2D and 3D. Accessing them you can create a large variety of elements, from a simple line to generating an entire wall on a polygon icon. You can also add images or change camera position and the point of view of the plan.

The 3D View Palette is one of the most attractive features of the application. It enables you to explore the designed structure, check for design flaws or get a better feel of how space is distributed. Also, while in the 3D view you can select objects, view their characteristics and modify them. Another feature to take into consideration is the

application's ability to generate 3D views of elevations, sections and perspectives in the form of detailed, high quality images.
