As mentioned, the software allows you to perform the data transfer between SQL and PostgreSQL databases, in an instant. Both the import and the export process can be performed in a short time. The software enables you to transfer data, between many

---

schemas or tables. The source and destination can be selected and the software will prompt you with the names of the tables or column names that you wish to transfer. You can upload any file as the source, and the software will instantly import the data, into your destination. In addition, the software

---

will print out the type of the imported data and the total amount of data transferred. Also, it will prompt you with the number of rows that have been imported, exported and the source, respectively. The software is very user-friendly and you may easily perform the import or export process. Besides the

---

standard file and database import, the software also allows you to perform the data migration between databases, for free. There is an open sourced MySQL extension for the software, which enables you to automatically perform the import or export process. The software is extremely safe and

---

will never run any processes on your computer. There are no risks involved in using the software, because it can be fully controlled and managed from within its interface. It is also extremely well-documented and you may easily follow the instructions, found within the software. Also, the forums are
