Thanks to its impressive detection engine, XpoLog will monitor all kinds of software log files to find any errors or problematic links that may cause performance issues, glitches and downtime. With the addition of several filters, you can control all the parameters that make up the analysis and ensure that you find the right errors and issues that may have resulted in system lockups and crashes. The solution also helps you to determine the links and traffic of your clients and visitors by identifying and categorizing different parts of the logs. In the end, you will be able to find the source of any errors and identify the files in the log that are responsible for the system performance issues or problems. The tool can also be used to locate the problems caused by SQL Server, Exchange Server, Outlook and other software services. The interesting part about XpoLog is that the tool is designed to make the most out of a huge amount of logs by providing you with all the information it collects in a single window. In addition to that, the interface is easy to use, clean and comprehensible. It makes finding the problems in the logs easy and provides you with clear details of any issues you may come across. **Highlighted Features:** - Supports all Windows Operating Systems - Provides you with a detailed analysis of any errors - Helps you to automatically troubleshoot system issues - Lets you find out whether there are any glitches in your server or in the software you use - Helps you monitor the traffic of your clients and website - Provides you with a comprehensive analysis of the source of any errors or crashes - Provides you with detailed information of all the events in the system - Finds errors and problematic links in your server - Helps you find the source of any error and the files involved in the crash - Lets you monitor the traffic of your clients and website - Allows you to diagnose and locate problems in your server - Helps you find out whether there are any glitches in your server or in the software you use - Automatically finds errors, risks and issues in the system - Helps you monitor the traffic of your clients and website - Helps you to identify errors and problematic links in your server - Provides you with a detailed analysis of all the events in the system - Finds errors and problematic links in your server - Automatically scans the latest logs - Helps you to automatically troubleshoot system issues - Automatically locates errors, risks and issues

XpoLog is an advanced platform that addresses professionals who need a reliable tool for managing and analyzing the log data of their servers, IT systems and technology infrastructure. Includes a clean and well-structured interface Even though it may take some time, the setup is quick, straightforward and requires minimal attention from your part. Upon launch, the application prompts you to make sure that the ports it requires to run are open and provides you with the address to launch in your default browser. As a side note, the tool supports only a handful of browsers, namely Internet Explorer, Microsoft Edge, Chrome and Firefox. The platform comes with an organized interface that is designed as a dashboard and hence, provides you quick access to all the primary functions. Depending on your needs, you can access the log viewer, include a new log, application detection wizard or create a new monitor. Packs powerful search and analytics functions The idea behind the application is to provide you with an easy method to analyze the software logs during testing, detect bugs before going live with an update, correlate log events by transactions and automatically detect problems and risks in real-time for your server or other IT infrastructures you are administrating. The highlight of the program stems from the fact that you can initiate your own investigation of problems in the system using the power Search function. Moreover, the utility can automatically scan the latest logs that enter the system for errors, risks and predefined rules, so that you do not waste too much time looking for the causes of the issues while attempting to troubleshoot a problem. A useful tool for identifying errors and problematic link in your server All things considered, XpoLog is a reliable software solution that enables you to analyze data logs so that you can quickly identify hidden errors, deep links problems as well as other intricate patterns in any log by providing an easily accessible visualization environment. by Chuck MaladBrussels (AFP) - EU antitrust chiefs have warned that their probe into Google could take years and told the internet giant to provide more information, a person close to the matter said Wednesday. "I expect it to take a very long time," the source said, confirming a report in EUobserver on Monday. The source said the European Commission was expected to decide by the end of this year whether to launch a formal investigation. "The commission is going to open a formal investigation in January 2017," the source said, adding that the decision would then be taken to the full EU
