Food, family and memories fill my life. Deep down I am a romantic with a bit of a wild side. I have lived in Paris, Sydney, San Francisco and London. I currently live with my partner and our two boys in the burbs just north of Toronto. Saturday, November 27, 2009 I was at the grocery store with my mother to get her a few things when I spotted the Christmas decoration at the back of the store. Being the dork I am, I couldn't resist a little photo with it. The big package in the photo above I bought for myself. I love it and think it makes a great addition to my storage cabinet. I also bought this one for myself in the same packaging and it will make a nice addition to the Christmas tree. I also made some Christmas cookies for the first time. I watched a few cooking shows in preparation. The dough is made in a food processor (recipe below) and then cut into shapes with a cookie cutter. Below is a picture of two shapes of cookies that I made. You can make your own shapes or buy simple ones at the grocery store. This recipe makes a lot of dough (3 cups), but if you are making 10 or fewer cookies you should have no problem with the amount of dough. The dough can be frozen and used any time during the holiday season and can be thawed for up to 3 months. The dough is easy to handle as long as it is in the refrigerator or freezer. You start by combining the flour, sugar, eggs, cream and butter. Mix until it comes together in a ball and then divide into thirds (see below). There are two methods for dividing the dough in thirds. Some cookbooks (mine included) suggest dividing into thirds by weight. This method results in equal sized pieces of dough. You can also roughly measure out 3 cups of flour. If you are using a food processor: 1 cup each of flour, sugar and butter. After adding the last 1/2 cup of flour add the eggs one at a time. Then add the cream. Process for 20-30 seconds until the mixture is creamy. Add the last 1/2 cup of flour. Process for another 20-30 seconds. Remove the dough and put in a large greased bowl. If you are using a stand mixer: 1 cup each of flour and butter. Add the sugar, eggs and cream and combine with mixer until dough forms. Then add

The Pen Tool lets you create a wide variety of different graphical objects. There are tools for both making lines or curves, a shape tool, an ellipse tool, and so on. The rectangle tool can be used to draw a box that can be filled and/or stroked. You can also use it to create a box the size of another box. You can also draw a box around a group of pixels. The Magic Wand tool can be used to select an area of the picture by using a tolerance level. The tool allows you to select groups of pixels with a single click. You can specify how much of the area in each direction should match with the selection (such as 5%, 15%, 50%, etc.). The Type tool is a versatile tool. You can use it to apply various fonts to your artwork and create shapes with the Text Tool. The Camera Raw filter lets you process RAW images taken from a digital camera. This is a must for photographers and artists. The Select tool is one of the most fundamental tools in Photoshop. Using it, you can select areas of an image to make other changes to them. You can also use it to copy and paste different areas of an image, or you can copy only a certain type of object from one picture and paste it to a new picture. The Path tool is used to draw out artworks from a variety of straight and curved lines. It's primarily used to create illustrations or illustrations in Photoshop. The Move tool lets you move images around within a document, or even move entire documents to new locations. You can use the tool to scale, rotate, or move images in small increments. The Zoom tool lets you zoom in on different areas of a document. You can use it to zoom in to areas of an image or a part of an object. You can also zoom out to see a whole document at once. The Eraser tool is the most basic of the tools. It's used to remove objects, such as objects drawn with the Pen Tool. The Crop tool allows you to selectively remove sections from an image. You can use the tool to remove areas of an image that are unevenly sized, too large, or too small. The Clone Stamp tool allows you to copy pixels from one area and paste them into another area. You can use the tool to repair damaged or corrupt images. The Clipping Mask tool allows you to mask out areas of an image and keep only the parts that you want to show
